

Code anchors: `mie_multi_hole.py:process_cine_file`, `OSCC_postprocessing.analysis.mie_multihole`, and `OSCC_postprocessing.binary_ops.feature_extraction`. The first page follows the detailed visual prototype: it separates reading, preprocessing, polar/plume-wise postprocessing, feature extraction, and final tabular outputs while keeping metadata/config dependencies as dotted red links.

Fit Raw Data Pipeline: 1D Metrics to Curve Parameters

Code anchors: `MLP/fit_raw_data.py:main`, `process_folder`, `prepare_cleaned_series`, `fit_sigmoid`, `apply_filter_masking`, `build_wide_series_df`, and `save_fit_plot`. The diagram shows the per-penetration-source path from processed 1D plume metrics to fitted curve parameters, quality flags, QA plots, and raw-series exports.
