

Mie Multi-Hole Pipeline: Video to 1D Per-Frame Metrics

Code anchors: `mie_multi_hole.py:_process_cine_file`, `OSCC_postprocessing.analysis.mie_multihole`, and `OSCC_postprocessing.binary_ops.feature_extraction`. The diagram shows the active pipeline from a normalized cine video to frame-wise 1D metrics; checkpointing and batch-folder traversal are omitted for clarity.

Fit Raw Data Pipeline: 1D Metrics to Curve Parameters

Code anchors: `MLP/fit_raw_data.py:main`, `process_folder`, `prepare_cleaned_series`, `fit_sigmoid`, `apply_filter_masking`, `build_wide_series_df`, and `save_fit_plot`. The diagram shows the per-penetration-source path from processed 1D plume metrics to fitted curve parameters, quality flags, QA plots, and raw-series exports.
